

What is our goal?

Our goal is to develop common guidelines and technical specifications to facilitate smooth access to health data and strengthen European collaboration in using data efficiently. Secondary use of health data enhances competitiveness of European research and innovation in the health sector.

What are we doing?

TEHDAS2 produces concrete guidelines and technical specifications for the European Commission and member states to ensure a harmonised implementation of the European Health Data Space (EHDS) regulation. Member states can use TEHDAS2 results to support their implementation efforts at the national level, while at the same time, the work will support the European Commission, for instance, in the drafting of the implementing acts defined in the EHDS regulation.

What are the benefits?

The benefits include harmonised rules and procedures for secondary use of health data to boost research, innovation, and policymaking, ultimately improving public health in Europe.

Who is involved?

The project is being carried out by 30 European countries. Stakeholders across Europe are invited to provide input to the work through public consultations. TEHDAS2 builds on the work of previous TEHDAS joint action and other European projects such as the HealthData@EU Pilot project, and it will be implemented in close collaboration with other ongoing projects and initiatives.

How to follow the project and connect?

All results, consultations and events will be published on the tehdas.eu website and social media. The TEHDAS2 coordination team can be reached by email at tehdascoordination@sitra.fi.

The work is divided into eight work packages:

1 Management and coordination

2 Communication

3 Evaluation

4 Collaboration models

5 Data discovery

6 Access to data

7 Safe and secure processing

8 Serving citizens

Co-funded by
the European Union

Co-ordinated by
the Finnish Innovation Fund
